

WIU PROJECT OVERVIEW

A detailed description of where each of the criteria is on your site. Anything not listed here may not be counted.

MODERNIZR

- **RGBA** – If the user’s browser does not support RGBA, Modernizr will load “no-rgba.css” which will replace the styles with HEX or RGB values. If it’s supported, “rgba.css” will load
- **Video** – If supported, Modernizr will load “video.js” which will append the VIDEO HTML to the header. If not supported, it will use the background color.
- **SVG** – If not supported, Modernizr will load “svg.js” which will change the IMG SRC to use a PNG version instead

JQUERY EFFECTS

- **Headings** – On page load and navigation, the headings are set to appear using the “Slide” jQueryUI plugin.
- **Heading Underlines** – On page load and navigation, SPAN tags below the headings animate from *width: 0px* to *width: 100px*
- **Tabs** – In the “About” section, I wrote custom jQuery to switch between content using *.hide* and *fadeIn*

REQUIREMENTS

1. **Animated Bar Chart** – Using the tutorial from the earlier assignment, I created a similar chart in the “Skills” section to display my skill progression in web development
2. **Interactive Image Gallery** – In the “Portfolio” section, I used the “LightBox” jQuery plugin to create a gallery that can be navigated using arrows or keyboard arrows
3. **HTML5 Video** – Using Modernizr to verify the user’s browser is compatible, *video.js* will append a video to the header and CSS will make it appear as a background behind the elements
4. **Interactive Map** – In the “Clients” section, I created an interactive map using the skills learned from the previous Lynda.com training we went over

An overview of why you chose the theme & Idea for your site.

I’ve been wanting to create a foundation for a portfolio for a long time and this seemed to be the best opportunity to start. The color theme was part of some inspiration from color.adobe.com, but also because I knew I wanted a darker theme with some cool colors. I believe it gives off the feelings and emotions I wanted to portray in the design.

Links to any graphics that you used online with releases that says you can use them
