HOVERINTENT – A JQUERY PLUGIN

By Andrew Lancaster

For my presentation project, I chose HoverIntent. This is a plugin that extends jQuery's .hover event function to keep it from firing on unintentional mouseovers. The reason I chose this plugin is that I use the jQuery .hover function a lot when creating websites and applications and I felt that it would be beneficial to learn this to keep page load and resources at a minimum. I was also surprised at how easy it was to set up and how lightweight it is.
